Oral Exam Syllabus
Laura Ciobanu

General/Combinatorial Group Theory

Free Groups and Their Subgroups

- Definition and elementary properties of free groups

- Nielsen-Schreier Theorem, Takahasi Theorem, Levi Theorem

- Properties of subgroups of finite index

Ref: Magnus 1.4, 2.4; Lyndon 1.1, 1.3

Automorphisms of Free Groups

- Presentation and properties of $Aut(F)$

Ref: Lyndon 1.4; Magnus 3.5

Nielsen Transformation

- Definition and applications

- Generalized word problem for (finitely generated) H in G

Ref: Magnus 3.1, 3.2; Lyndon 1.2

Tietze Transformation

- Definition and applications

Ref: Magnus 1.5

Free Products, Free Products with Amalgamation, HNN Extensions

- Definitions and properties

- The normal forms for free products, free products with amalgamation and HNN extensions

- The conjugacy theorems for free products, free products with amalgamation, and HNN extensions

- The Higman, Neumann, and Neumann theorem

Ref: Magnus 4.1, 4.2; Lyndon 1.11, 4.2

Equations over Groups, Equations in Free Groups

Ref: Lyndon 1.6, 1.8

Computational Group Theory

Rewriting Systems

- Orderings of free monoids, Canonical words, A test for confluence

- The Knuth-Bendix procedure

- Heuristics, Right Congruences

Ref: Sims Ch. 2

Subgroups of Free Products of Cyclic Groups

- Definition of languages and automata, Types of automata

- Niladic rewriting system, Subgroups and their languages, Important cosets,
    Coset automata

- Basic coset enumeration

- The coincidence procedure, Standardization, Computation with subgroups,
    Standard coset tables

Ref: Sims Ch. 3, Ch. 4

Coset Enumeration

- The general case

- The HLT strategy, The Felsch strategy, Standardizing strategies, Ten ver-
    sions

- Low-index subgroups

- A comparison with the Knuth-Bendix procedure

Ref: Sims Ch. 5

The Reidemeister-Schreier Method

- Presentations of subgroups

- Examples of extended coset enumeration, An extended HLT enumeration
    procedure

- Symplifying presentations

Ref: Sims Ch. 6, Magnus 2.3

Abelian Groups

- Free abelian groups, Elementary matrices, Finitely generated abelian groups

- Modular techniques, The Kannan-Bachem algorithm

- Lattice reduction, The modified LLL algorithm, Comparison

Ref: Sims Ch. 8
