December, 1994

Instructions to the students in Math 311 and 351:

Please try to spend a few minutes answering the following questions, which concern the experimental workshop format of the course. We would prefer brief discussions or explanations rather than just one-word answers. Please return your answers at the next class meeting. You may sign your answers if you wish — you do not have to. The answers will **not** be read until January. (Use the back or additional sheets if you wish.)

1. Have you spent additional time on the course because of the workshops? How much, if any?

2. Do you think that the workshops contributed to your understanding of the mathematics in the course?

3. Do you think that the workshops improved your ability to communicate mathematics orally and in writing?

4. Have you worked more with other students from the class on course material *outside* of the formal class and workshop meetings than you have in other math courses?

5. Do you think that the workshops were worth the extra time?

6. What do you think could be done to make the workshops more useful to you?
