

## Second Monday Math 135 review problems for section F2

### Substitution

1.  $\int (3x - 6)e^{3x^2 - 12x} dx$
2.  $\int_0^{\sqrt{\ln 7}} xe^{(x^2)} dx$ .

### Antiderivatives & initial value problems

1. Suppose  $f''(x) = x + \frac{1}{x^2}$  and  $f(1) = 1$  and  $f'(1) = -2$ . Find a formula for  $f(x)$ . Computations with exp and log should be simplified as much as possible; approximations are not acceptable.
2. Suppose  $f''(x) = \cos x + \sin(2x)$  and  $f(0) = 0$  and  $f'(\pi) = 0$ . Find a formula for  $f(x)$ . Computations with sine and cosine should be simplified as much as possible; approximations are not acceptable.
3. Suppose  $f''(x) = e^x - 1$  and  $f(0) = 2$  and  $f'(0) = -3$ . Find a formula for  $f(x)$ . Computations with exp and log should be simplified as much as possible; approximations are not acceptable.

### Definite integral

1. Suppose  $P$  and  $Q$  are constants, and  $f(x) = P \sin(7x) + Qx \cos(7x)$ . Find specific values of  $P$  and  $Q$  so that  $f'(x) = x \sin(7x)$ . Use your answer to evaluate  $\int_0^{\pi/7} x \sin(7x) dx$ .
2. Suppose  $f(x) = xe^x - e^x$ . Compute  $f'(x)$ , and use your answer to evaluate  $\int_0^1 xe^x dx$  exactly.
